BUSINESS OVERVIEW

PLAIN ENGLISH

- Marvell designs the specialized chips that move and process data inside AI data centers.
- It does two things: it sells off-the-shelf connectivity chips, the optical and networking silicon that shuttle data between thousands of AI processors, and it co-designs custom AI accelerators for individual cloud giants like Amazon and Microsoft.
- It does not run its own factories; TSMC builds the chips.
- Marvell does not sell to consumers; its customers are the largest cloud and networking companies in the world.

THE TECHNICAL VERSION

- Marvell is a fabless designer of data-infrastructure silicon manufactured at TSMC. Its merchant portfolio includes PAM4 and coherent optical DSPs (Spica/Nova/Ara at 1.6T), silicon photonics, Teralynx Ethernet switch silicon (51.2 Tbps class), and Arm-based infrastructure CPUs.
- Its custom-silicon business co-designs application-specific XPUs/ASICs and interconnect IP for individual hyperscalers (e.g., AWS Trainium, Microsoft Maia), using in-house SerDes, advanced-packaging and IP. The March 2026 NVIDIA deal integrates Marvell custom XPUs and scale-up networking into NVLink Fusion.
- FY2026 revenue ~74% data center; management targets ~\$11.5B FY2027 and ~\$16.5B FY2028 revenue with >\$10B custom-silicon revenue by FY2029.

EXPLAINED SIMPLY

- Think of an AI data center as a city of tens of thousands of AI brains that must talk to each other constantly.
- Marvell makes two things that city needs.
- First, the roads and fiber-optic highways, the chips that let all those brains exchange data at light speed without traffic jams.
- Second, for the biggest cloud companies, Marvell will custom-build a brain designed for exactly that company's work, instead of an off-the-shelf one.
- Broadcom is the biggest company doing this custom-brain work; Marvell is the clear number two.
- And in early 2026, Nvidia, the company that makes the most popular AI brains, bought a piece of Marvell and teamed up with it, a strong vote of confidence.

- Marvell (NASDAQ: MRVL) is a fabless data-infrastructure chipmaker that has re-centered itself on the AI data center.
- FY2026 revenue was a record \$8.195B, up 42% YoY, with data center ~74% of the total (~\$6.1B).
- It runs two engines: merchant connectivity silicon (PAM4/coherent optical DSPs, Teralynx switching, Arm CPUs) and custom silicon (XPU/ASICs) co-designed for individual hyperscalers.
- Custom silicon scaled from ~zero to roughly a quarter of data-center revenue across 18+ cloud design wins and 50+ active opportunities with 10+ customers.
- It is the clear merchant #2 in custom AI silicon behind Broadcom, and a leader in high-speed electro-optics for AI interconnects.
- In March 2026 NVIDIA took a ~\$2B (~2.5%) stake and entered an NVLink Fusion / silicon-photonics / AI-RAN partnership.
- Management targets ~\$11.5B revenue in FY2027 and ~\$16.5B in FY2028, with >\$10B custom-silicon revenue by FY2029.
- In June 2026 the stock re-rated sharply after NVIDIA's Jensen Huang publicly flagged Marvell as a potential trillion-dollar company.
- It pruned non-core automotive by selling its Brightlane Automotive Ethernet unit to Infineon for \$2.5B (closed Aug 2025).

How the business works, left to right: who buys, what the platform provides, and the payoff.

HOW MARVELL TECHNOLOGY IS DIFFERENT

PLAYER	WHAT THEY MAKE	HOW MARVELL TECHNOLOGY DIFFERS
Broadcom (AVGO)	Custom AI ASICs/XPU's plus a dominant Ethernet-switch and optical franchise, at far larger scale	
NVIDIA (NVDA)	Merchant GPU's and the full AI-server stack (also now a ~2.5% Marvell shareholder and NVLink partner)	
Astera Labs (ALAB)	Pure-play AI-rack connectivity (retimers, PCIe/CXL, fabric)	
Credo (CRDO)	Active electrical cables (AECs) and SerDes/DSP connectivity	
Alchip / Global Unichip (GUC)	Taiwanese custom-ASIC design services	

Microchip / analog peers (MCHP) Broad analog/embedded MCUs for industrial and auto

EXECUTIVE LEADERSHIP

CHAIRMAN, PRESIDENT & CEO SINCE 2016

Matt Murphy

CEO since July 2016; led Marvell's transformation into a data-infrastructure and AI-silicon company. Previously a longtime executive at Maxim Integrated.

CHIEF FINANCIAL OFFICER SINCE 2023

Willem Meintjes

CFO effective Jan 20, 2023; previously Marvell's Chief Accounting Officer and Treasurer since 2018. Joined Marvell in 2016.

PRODUCT & REVENUE MODEL

- Merchant data-infrastructure silicon, PAM4/coherent optical DSPs (Spica/Nova/Ara 1.6T), silicon photonics, Teralynx Ethernet switching, and Arm-based infrastructure CPUs, sold across many customers.
- Custom silicon, bespoke XPU/ASICs and interconnect IP co-designed for individual hyperscalers (AWS Trainium, Microsoft Maia), now ~a quarter of data-center revenue and the primary growth driver.
- All fabricated at TSMC. The March 2026 NVIDIA partnership embeds Marvell custom XPUs and scale-up networking into NVLink Fusion.

RECENT NEWS

Marvell soars ~32% as NVIDIA's Jensen Huang calls it a potential trillion-dollar company

SOURCE: [CNBC](#)

An unusually direct endorsement from the dominant AI-systems vendor (and a Marvell shareholder) reframes the bull case and the multiple. Watch the durability of the re-rating and read-through to AVGO and the broader custom-silicon/optical complex.

2026-03-31

NVIDIA invests ~\$2B in Marvell; NVLink Fusion / silicon-photonics / AI-RAN partnership

SOURCE: [CNBC](#)

A ~2.5% strategic stake plus deep platform integration embeds Marvell custom XPUs and scale-up networking inside NVIDIA's semi-custom AI-factory ecosystem. Validates the roadmap but ties Marvell's fortunes more closely to NVIDIA and raises questions on NVLink-linked design economics.

2026-03-06	Stock +18% as CEO Matt Murphy points to continuing AI demand: 'Do you see me blinking?' SOURCE: CNBC Strong FY2026 results and an upbeat FY2027 trajectory eased fears of a custom-silicon slowdown. The sharp reaction shows how sensitive the name is to AI-demand narrative and management confidence.
2026-03-05	Record Q4 FY2026 revenue \$2.219B (+22% YoY); FY2026 \$8.195B (+42%) SOURCE: SEEKING ALPHA Confirms AI data center as the engine (~74% of revenue) with non-GAAP EPS up 81% YoY, setting the baseline for the FY2027 acceleration that underpins the bull thesis.
2025-09-03	Record Q2 FY2026 revenue \$2.01B (+58% YoY); data center \$1.49B (+69%) SOURCE: FUTURUM GROUP Demonstrated the steep AI ramp but surfaced gross-margin pressure (non-GAAP ~59%) and rising competition from Broadcom and Taiwanese ASIC houses, a key debate for the stock.
2025-08-14	Infineon completes \$2.5B acquisition of Marvell's Brightlane Automotive Ethernet business SOURCE: INFINEON TECHNOLOGIES Portfolio pruning that exits a non-core automotive franchise to sharpen focus on AI data center and free up capital, a clean read on capital-allocation discipline.
2025-06-17	Custom AI Silicon investor webinar; raises TAM, reiterates multi-year targets SOURCE: SEEKING ALPHA Management quantified the custom opportunity (>\$10B custom revenue by FY2029; 50+ opportunities across 10+ customers), framing the long-term TAM behind the AI bull case.
2025-04-22	Marvell agrees to sell Automotive Ethernet business to Infineon for \$2.5B (all-cash) SOURCE: SEEKING ALPHA Signaled a strategic narrowing to AI/data-center connectivity and compute, monetizing a non-core asset at a premium and setting up a cleaner growth profile.

FINANCIALS & KEY METRICS

Q4 FY2026 (fiscal year ended ~early Feb 2026); most recent fiscal-year close. A record Q1 FY2027 (~\$2.418B, +27% YoY) was subsequently reported. · 2026-03-05

REVENUE Q4	REVENUE FY26	DATA CENTER FY26	GROSS MARGIN

+22% YoY	+42% YoY	~74% of revenue	GAAP 51.7%

EPS NON GAAPQ4 \$0.80 GAAP \$0.46	EPS NON GAAPFY26 \$2.84 +81% YoY	FY27TARGET ~\$11.5B revenue growth accelerating each quarter	CUSTOM TARGET >\$10B custom-silicon revenue by FY2029
---	--	--	--

- AI / Product:** Management said robust AI demand drove record FY2026 results, with custom silicon scaling from effectively zero to ~a quarter of data-center revenue across 18+ cloud design wins and 50+ active custom opportunities with 10+ customers. CEO Matt Murphy said FY2026 design wins hit an all-time record and bookings were growing at a record pace into FY2027.
- Demand:** Demand was led overwhelmingly by AI data center (~74% of FY2026 revenue), with data-center YoY growth expected to accelerate each quarter in FY2027. Outside data center, enterprise networking (+28% YoY in Q2 FY2026) and carrier infrastructure (+71% off a low base) were recovering from cyclical troughs, consumer was lumpy (+30%), and automotive/industrial was roughly flat and reduced after the Infineon divestiture.
- Analyst take:** Sell-side stayed constructive post-print (e.g., J.P. Morgan reiterated Overweight, lifting its target after Q4). The debate centers on whether custom-silicon and optical growth can sustain the re-rating against Broadcom and Taiwanese ASIC competition and gross-margin pressure as custom mix rises.

KEY RISKS & DEBATES

- ! Priced for acceleration:** a steep EV/Rev multiple (see live comps) leaves the stock exposed to compression if the FY2027 ramp or custom-silicon design wins disappoint.

! **Competition:** Broadcom (the #1) and Taiwanese ASIC houses (Alchip, GUC) are pressing on custom-silicon economics and design wins.

! **Margin mix:** rising custom-silicon mix carries lower gross margin than merchant products, pressuring blended GM as the segment scales.

! **Customer concentration:** data-center revenue is concentrated in a handful of hyperscaler custom programs (AWS, Microsoft); a single program slip is material.

! **NVIDIA dependence/optics:** the NVLink Fusion partnership deepens reliance on NVIDIA's roadmap and raises questions on the economics of NVLink-linked designs.

! **Narrative sensitivity:** the June 2026 'trillion-dollar' re-rating leaves a high bar; sentiment-driven moves cut both ways.

! **Cyclical tails:** enterprise, carrier, and consumer remain off cyclical troughs and could relapse.

SLIDE-READY BULLETS

- 1

Record FY2026 revenue \$8.195B (+42% YoY); AI data center ~74% (~\$6.1B), the growth engine.
- 2

Custom silicon scaled from ~zero to ~a quarter of data-center revenue; 18+ cloud design wins, 50+ opportunities; >\$10B custom target by FY2029.
- 3

NVIDIA took a ~\$2B (~2.5%) stake + NVLink Fusion / silicon-photonics partnership (Mar 2026); Huang flagged a possible \$1T path (Jun 2026).
- 4

Clear merchant #2 to Broadcom in custom AI silicon and an optical-DSP (PAM4) leader; mgmt targets ~\$11.5B FY2027 / ~\$16.5B FY2028.
- 5

Trades at a steep EV/Rev premium to most semi peers (see live comps); key debates are margin mix and Broadcom/Taiwan ASIC competition.

SMART DILIGENCE QUESTIONS

- Q1

How concentrated is custom-silicon revenue across AWS Trainium, Microsoft Maia, and any Google program, and what are the contracted volumes/economics versus pipeline behind the >\$10B FY2029 target?
- Q2

As custom mix rises (lower GM than merchant), what is the trajectory of blended gross margin, and how does management defend it against Broadcom and Taiwanese ASIC pricing?
- Q3

What exactly do the NVIDIA stake and NVLink Fusion partnership entail commercially, design-win exclusivity, revenue economics, and IP, and how dependent is Marvell's roadmap on NVIDIA's?
