BUSINESS OVERVIEW

PLAIN ENGLISH

- Planet runs the largest fleet of imaging satellites on orbit.
- Its 'Dove' satellites photograph the entire land surface of Earth nearly every day, and its higher-resolution SkySat and new Pelican satellites zoom in on specific targets.
- It sells this imagery as a subscription, mostly to governments (defense and intelligence) and to industries like agriculture and mapping.
- Increasingly it also sells analytics, using AI to turn the pictures into answers, and signs large multi-year deals where a government funds dedicated satellites Planet builds and operates for it.

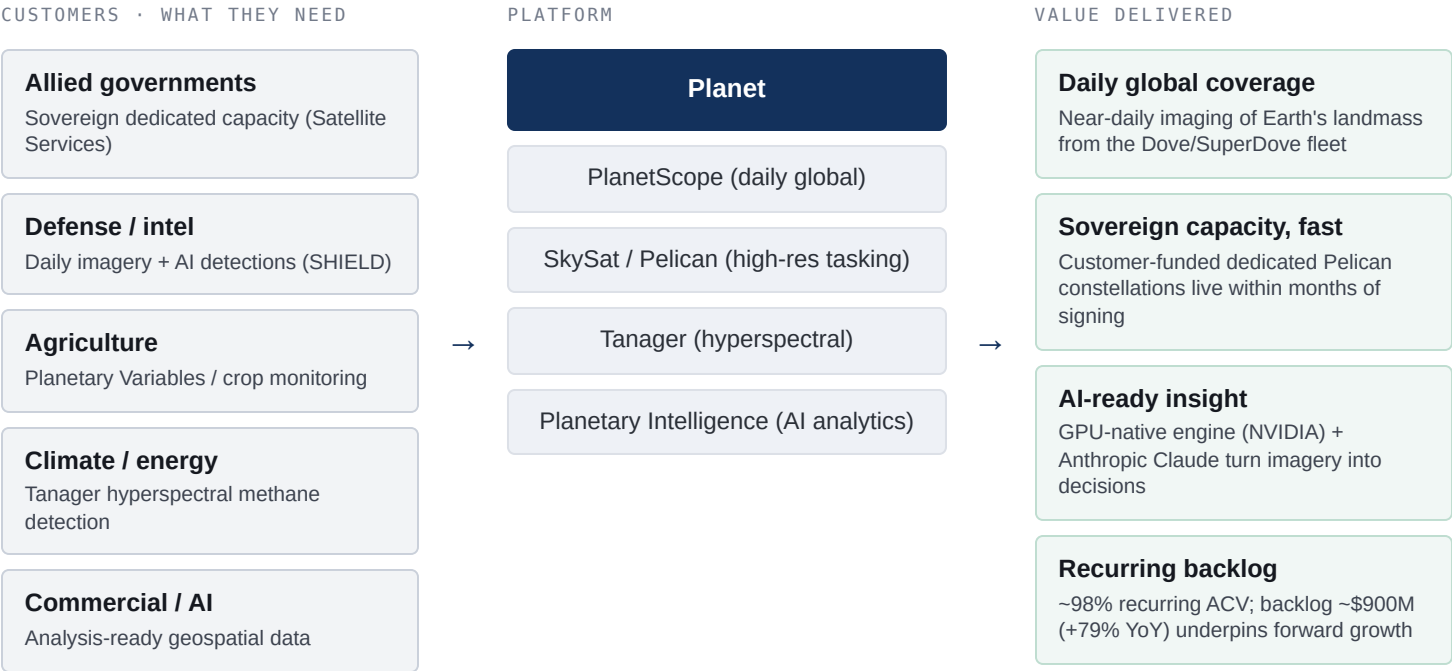

THE TECHNICAL VERSION

- Planet operates PlanetScope (near-daily ~3m global coverage from the Dove/SuperDove fleet), SkySat (sub-meter tasking imagery/video), the next-gen Pelican high-resolution constellation (with onboard NVIDIA Jetson for edge AI), and Tanager hyperspectral satellites (VSWIR spectrometer with Carbon Mapper for methane/CO2 detection).
- Monetization is ~98% recurring ACV across data subscriptions and a growing 'Satellite Services' model where sovereigns fund dedicated Pelican capacity and direct downlink.
- An analytics layer ('planetary intelligence') is being built on a GPU-native AI engine with NVIDIA (Blackwell/IGX Thor) and an Anthropic (Claude) partnership; Planet is a prime on the U.S. MDA SHIELD IDIQ. FY2026 revenue \$307.7M (+26%), first full year of adjusted-EBITDA profitability (\$15.5M), backlog ~\$900M (+79%).

EXPLAINED SIMPLY

- Imagine a camera in space that takes a fresh photo of the whole planet every single day, and a set of sharper cameras you can point at any spot on demand.
 - Planet owns the biggest such fleet.
 - Governments and companies pay a subscription to see how the world is changing, troop movements, crops, ships, methane leaks.
 - Lately Planet does two new things: it signs big multi-year deals where a country (Germany, Japan, Sweden) pays Planet to build and fly satellites dedicated to it; and it uses AI (with Nvidia and Anthropic) to turn the flood of images into plain answers.
 - In its latest year it turned its first annual profit and its backlog of signed future business jumped almost 80%.
-
- Planet Labs (NYSE: PL) operates the world's largest Earth-observation satellite fleet, imaging Earth's landmass near-daily.
-
- FY2026 (ended Jan 31, 2026) revenue was \$307.7M (+26% YoY); Q4 was a record \$86.8M (+~41% YoY).
-
- FY2026 was its first full year of adjusted-EBITDA profitability (\$15.5M vs an ~\$11M loss the prior year).
-
- Backlog reached ~\$900M (+79% YoY) and cash/short-term investments rose to ~\$640M, materially de-risking the story.
-
- Growth is led by a 'Satellite Services' model: sovereigns fund dedicated Pelican capacity, Germany (~EUR 240M), Japan/JSAT (\$230M, 10 satellites), Sweden (low nine-figure).
-
- It is layering on AI 'planetary intelligence' via a GPU-native engine with NVIDIA and an Anthropic (Claude) partnership.
-
- It was named a prime under the U.S. Missile Defense Agency's SHIELD IDIQ for AI-enabled detection/warning.
-
- Products span PlanetScope (daily global), SkySat/Pelican (high-res tasking), and Tanager hyperspectral (with Carbon Mapper).
-
- FY2027 revenue is guided to \$415, 440M (~39% growth at midpoint), signaling durable acceleration as sovereign backlog converts.

How the business works, left to right: who buys, what the platform provides, and the payoff.

HOW PLANET LABS PBC IS DIFFERENT

PLAYER	WHAT THEY MAKE	HOW PLANET LABS PBC DIFFERS
Maxar Intelligence	Very-high-resolution optical imagery (now private, Advent-owned)	
BlackSky (BKSJ)	High-revisit high-res tasking imagery + analytics	
ICEYE / Capella / Umbra	Synthetic-aperture radar (SAR), all-weather day/night	
Airbus Defence and Space	Optical + SAR imagery within a defense-prime	
Satelloptic (SATL)	Sub-meter optical imagery at low cost	
Traditional aerospace primes	Bespoke sovereign constellations over multi-year programs	

EXECUTIVE LEADERSHIP

CO-FOUNDER, CEO & CHAIRPERSON
SINCE 2010

Will Marshall

Co-founded Planet; former NASA scientist. Leads strategy around daily global imaging and the pivot to AI-driven 'planetary intelligence' and sovereign satellite services.

PRESIDENT & CFO SINCE 2020

Ashley Fieglein Johnson

Joined as CFO Feb 2020, added COO Mar 2021, assumed President title Mar 2024. Previously CFO/COO at Wealthfront; CFO/Chief Customer Officer/Interim CEO at ServiceSource.

PRODUCT & REVENUE MODEL

- Recurring data subscriptions to PlanetScope (near-daily ~3m global) and SkySat (sub-meter tasking), plus a fast-growing 'Satellite Services' model where sovereign governments fund dedicated next-gen Pelican capacity and direct downlink.
- A hyperspectral line (Tanager, with Carbon Mapper) detects methane/CO2.
- An emerging analytics layer, 'planetary intelligence', is built on a GPU-native AI engine (NVIDIA Blackwell/IGX Thor) and an Anthropic Claude partnership, moving Planet up the value chain from raw imagery to decisions. ~98% of ACV is recurring.

RECENT NEWS

2026-04-30

Planet and Carbon Mapper sign agreement for new Tanager hyperspectral spacecraft
SOURCE: BUSINESS WIRE

Extends the hyperspectral franchise (methane/CO2 and materials detection) beyond Tanager-1, supporting a recurring sustainability/government data motion and a second differentiated data product alongside optical imagery.

2026-03-19

Q4/FY2026: record \$86.8M Q4 revenue (+~41%), first full year of adjusted-EBITDA profit, backlog +79% to ~\$900M
SOURCE: NASDAQ

Inflection quarter: first annual non-GAAP profit (\$15.5M adj. EBITDA), record backlog and ~\$640M cash de-risk the story; the FY2027 guide of \$415, 440M (~39% growth) signals durable acceleration.

2026-03-16

Planet to build 'world's first GPU-native AI engine for planetary intelligence' with NVIDIA
SOURCE: BUSINESS WIRE

Anchors the analytics/AI thesis to NVIDIA Blackwell/IGX Thor compute (mgmt cited up to 100x speedups on parts of the codebase) and a higher-margin software layer on top of imagery.

-
- 2026-03-03 **Planet selected as a prime under the Missile Defense Agency's \$151B SHIELD IDIQ**
SOURCE: BUSINESS WIRE
Establishes Planet as a prime (not just a data sub) on a marquee U.S. missile-defense vehicle for AI-enabled detections/warnings, expanding addressable defense budget and validating the analytics pivot for national-security buyers.
-
- 2026-01-12 **Low nine-figure multi-year satellite-services deal with the Swedish Armed Forces (alongside ICEYE)**
SOURCE: BUSINESS WIRE
Third sovereign satellite-services win in ~12 months (after Germany and Japan/JSAT), reinforcing the dedicated-capacity model for allied governments and adding multi-year backlog; the co-award with SAR provider ICEYE shows optical+SAR allied procurement.
-
- 2025-11-28 **Planet launches high-resolution Pelican-5 and Pelican-6 plus 36 SuperDoves**
SOURCE: BUSINESS WIRE
Demonstrates fleet-refresh execution and capacity growth: scaling the higher-value Pelican high-res constellation while sustaining daily PlanetScope coverage, the supply side needed to convert sovereign backlog.
-
- 2025-07-01 **~EUR 240M (\$280M) multi-year German government satellite-services agreement**
SOURCE: SPACENEWS
Largest contract in Planet's history at signing; dedicated Pelican capacity plus PlanetScope/SkySat data and AI for European security, with revenue recognition starting ~Jan 2026, a template for the sovereign model.
-
- 2025-03-06 **Planet and Anthropic partner to use Claude to turn satellite imagery into actionable insights**
SOURCE: BUSINESS WIRE
Signals the LLM/analytics direction: pairing Planet's daily global archive with frontier AI for pattern/anomaly detection, supporting a shift up the value chain from raw data to decisions.
-
- 2025-01-29 **\$230M agreement with SKY Perfect JSAT to build and operate 10 Pelican satellites**
SOURCE: SATNEWS
Capital-light fleet expansion in APAC: a customer-funded constellation (revenue over ~7 years) that grows capacity and recurring services revenue without Planet bearing all the capex.
-

FINANCIALS & KEY METRICS

Q4 FY2026 (quarter and full year ended Jan 31, 2026); most recent reported. · 2026-03-19

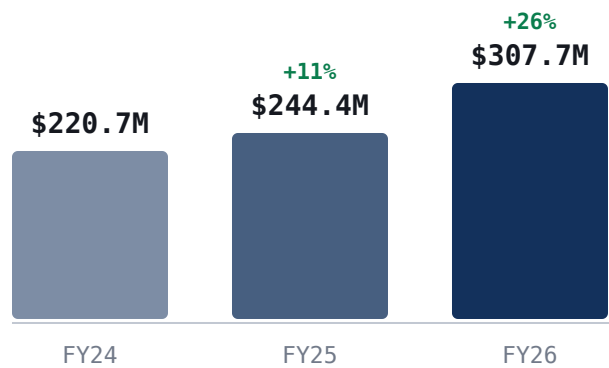

REVENUE Q4 \$86.8M +~41% YoY	REVENUE FY26 \$307.7M +26% YoY	ADJ EBITDA FY26 \$15.5M first full year of profitability; vs ~\$11M loss FY25	BACKLOG ~\$900M +79% YoY
RECURRING ACV ~98% of end-of-period ACV recurring; ~85% annual/multi-year	CASH ~\$640M +188% YoY	GUIDANCE Q1FY27 \$87–91M ~34% YoY at midpoint	GUIDANCE FY27 \$415–440M ~39% growth at midpoint

- AI / Product:** Management positioned Planet as building 'planetary intelligence', converting its daily global archive into analysis-ready insight with frontier AI. CEO Will Marshall: 'While LLMs offer users the incredible ability to have conversations with the text of the Internet, they know very little about the physical world.' Planet announced a GPU-native AI engine with NVIDIA (Blackwell/IGX Thor) citing up to '100x on certain parts of our codebase,' an Anthropic (Claude) partnership, and Google's Project Suncatcher TPU-in-space tech demo. It was selected as a prime under the MDA's SHIELD IDIQ for AI-enabled detection/warning.
- Demand:** Demand is led by government, defense and intelligence, 'security is an urgent mandate for governments worldwide.' Satellite Services (sovereign dedicated-capacity deals) drove the year, with three large deals signed in 12 months (Germany ~EUR 240M, Japan/JSAT, Sweden). CEO noted the sovereign pipeline has 'grown appreciably in both number of deals and average deal size' and that Planet can launch first satellites 'within a few months of contract signing... far faster than traditional aerospace.' CFO flagged a higher proportion of large, shorter-term government contracts shifting the contract-duration mix.
- Analyst take:** The print reframed PL from a cash-burning imagery vendor to a profitable, backlog-rich defense/AI platform. The bull case rests on sovereign-services momentum and the AI-analytics layer converting backlog to high-margin recurring revenue; the debate is the rich EV/Rev multiple (see live comps) against still-modest absolute revenue and government-contract lumpiness.

KEY RISKS & DEBATES

- ! **Valuation:** trades at a steep EV/Rev multiple (see live comps) on a small (~\$308M) revenue base; the re-rating leaves little room for execution slips.
- ! **Customer concentration / lumpiness:** a handful of large sovereign deals (Germany, Japan, Sweden) drive growth and revenue timing; one slip or delayed recognition is material.
- ! **Government dependence:** revenue is increasingly tied to defense budgets and procurement cycles, exposing Planet to political and budget risk.
- ! **Contract-duration mix:** management flagged more large, shorter-term government contracts, lowering the annual/multi-year ACV share to ~85%.
- ! **Capex / fleet execution:** Pelican and Tanager ramps require continued launches and on-orbit performance; capital-light sovereign deals mitigate but do not remove capex.
- ! **AI monetization is early:** the NVIDIA/Anthropic 'planetary intelligence' layer is promising but not yet a proven, sized revenue line.
- ! **Competitive intensity:** Maxar, BlackSky, Airbus, and SAR players compete for the same defense/intel budgets.

SLIDE-READY BULLETS

1	FY2026 revenue \$307.7M (+26%); record Q4 \$86.8M (+41%); first full year of adjusted-EBITDA profit (\$15.5M).
2	Backlog ~\$900M (+79% YoY), ~\$640M cash, ~98% recurring ACV; FY2027 guide \$415, 440M (~39% growth).
3	Sovereign 'Satellite Services' is the engine: Germany (~EUR 240M), Japan/JSAT (\$230M), Sweden, >\$500M combined.

- 4
- AI 'planetary intelligence' via NVIDIA GPU-native engine + Anthropic Claude; named a prime on MDA's SHIELD IDIQ.
- 5
- Largest daily-imaging EO fleet; trades at a premium EV/Rev to most space peers (see live comps).

SMART DILIGENCE QUESTIONS

- Q1
- How much of the ~\$900M backlog is contracted/funded versus optional, and what is the revenue-recognition schedule across the German, JSAT and Swedish deals (and the German Jan-2026 start)?
- Q2
- What is the true unit economics and margin profile of 'Satellite Services' versus core data subscriptions, and how does the shift to large, shorter-term government contracts affect durability of the ~98% recurring ACV?
- Q3
- How will the NVIDIA/Anthropic 'planetary intelligence' layer be monetized and sized, is it a distinct revenue line with pricing, or an enabler that lifts attach/retention on existing imagery?
